

Forget stealing signs, there's an easier way.

Rll Sports Technology's Codebreaker platform automatically analyzes film data and identifies hundreds of high-probability tendencies based on the pre-snap positioning and behaviour of key personnel. The way players line up in certain situations you can tell with a high degree of certainty whether a team is about to run or pass, what direction they're going, who's being targeted, what coverage they'll be in, who's rushing the passer, who's dropping in coverage, and more. Simply knowing who to focus on can tell you what's coming next.

Below you'll find an example of our Codebreaker Coach's Report showing the types of Offensive and Defensive player tendencies we generate for our clients (we've sanitized the team/player specifics, but the rest is real information). In addition to this summary report, we deliver a full set of results containing thousands of even more detailed tendencies.

If you're a Division I FBS or FCS team we welcome you to use Codebreaker for the rest of the year - free, no charge at all. Just click below to let us know you're interested and we'll get you up and moving right away.
